LIST OF FIGURES

SECTION I

Figure 2.1 The Vendor's-Eye View of Convergence
Figure 2.2 Timeouts for a Range of Network Technologies
Figure 2.3 A Resilience Scaleability Hierarchy
Figure 2.4 The "Stovepipe" Carrier Architecture
Figure 2.5 Transit Traffic Distribution Effects on Ring Topology
Figure 2.6 Evolution of OTN Design Driven by Bandwidth Efficiency
Figure 2.7 Ring vs. Mesh Topology
Figure 2.8 Economic Benefits of Sharing Protection Capacity in a Converged Network
Figure 2.9 Capability Comparison Between Major Communication Technologies
Figure 2.10 Quadrant of Requirements, Carrier Networks vs. the Internet
Figure 2.11 Three Phases of Carrier Thinking

SECTION II

SECTION III

SECTION IV

Figure 4.1 Detecting Link Failures on Sonet/SDH and Ethernet
Figure 4.2 Shortest Paths Through a Routed Network
Figure 4.3 Link Protection With MPLS Fast Reroute
Figure 4.4 Node Protection With MPLS Fast Reroute
Figure 4.5 Presignaled MPLS LSP
Figure 4.6 Standard and Distributed APS Protection
Figure 4.7 Link Aggregation in Action
Figure 4.8 Network Resilience Features

SECTION V

Figure 5.1 Three Aspects of Node Reliability
Figure 5.2 Typical Carrier Power Configuration
Figure 5.3 Simplified Router Operating System
Figure 5.4 Maintaining Connections During O/S Upgrades
Figure 5.5 Stateful Switchover
Figure 5.6 Node Reliability Features

SECTION VI

Figure 6.1 Control Plane and Data Plane Operation in an MPLS LSR
Figure 6.2 Multipoint-to-Point Operation in MPLS
Figure 6.3 Ultimate Hop Pop Operation in MPLS
Figure 6.4 Penultimate Hop Pop Operation in MPLS
Figure 6.5 OAM Features

SECTION VII
