LIST OF FIGURES*

SECTION I
Figure 1.1 Multiservice Switching Market Summary .......................................................... 4
Figure 1.2 Survey Respondents by Service Provider Type ........................................... 9
Figure 1.3 Survey Respondents by Geographic Region ................................................ 9
Figure 1.4 Survey Respondents by Purchase Influence ............................................. 10

SECTION II
Figure 2.1 Network Convergence on MPLS .................................................................. 11
Figure 2.2 IP/MPLS Migration Phases ......................................................................... 12
Figure 2.3 Operator Migration Plans for Multiservice Edge Networks ...................... 13
Figure 2.4 Multiservice Edge Migration Strategies ....................................................... 13
Figure 2.5 IP/MPLS Migration Plan ........................................................................... 14
Figure 2.6 Service Provider Plans for FR/ATM Customer Migration ......................... 15
Figure 2.7 Factors That May Limit Migration to IP/MPLS ......................................... 16
Figure 2.8 Current TDM-Based Backhaul Model for Wireless Networks ............... 17
Figure 2.9 Data Service Evolution in GSM Networks ............................................... 17
Figure 2.10 Multiservice Switch Opportunities in the Radio Access Network ......... 18

SECTION III
Figure 3.1 The Data Network Before Convergence on the MSE ............................... 20
Figure 3.2 Multiservice Over MPLS, via the MSE ...................................................... 21
Figure 3.3 Defining the Multiservice Edge ................................................................. 22
Figure 3.4 AT&T’s Transition Strategy ....................................................................... 23
Figure 3.5 Present Mode of Operation ...................................................................... 24
Figure 3.6 Layer 2 and Layer 3 MSE ........................................................................ 25
Figure 3.7 Transport MSE ......................................................................................... 26
Figure 3.8 Heavy Reading MSE Taxonomy ............................................................ 27
Figure 3.9 Services Currently Supported on Multiservice Edge Switches ............. 27
Figure 3.10 Growth of Multiservice Edge Network Revenues ................................ 28
Figure 3.11 Primary Driver for Multiservice Growth in 2005 ................................. 28
Figure 3.12 Service Provider Satisfaction with Multiservice Switch Equipment .... 29
Figure 3.13 Reasons for Multiservice Switch Dissatisfaction ................................. 29
Figure 3.14 Features of Multiservice Switches Ranked ........................................... 30
Figure 3.15 Pseudowire Reference Model ............................................................... 30
Figure 3.16 Importance of Pseudowires in Multiservice Switch Equipment ....... 31
Figure 3.17 Key Business Driver for Deploying Pseudowire Technology ............ 31

SECTION IV
Figure 4.1 MCI Converged Packet Access Network Infrastructure ....................... 38
Figure 4.2 WilTel’s Future Metro Edge Architecture ................................................ 44

SECTION V
Figure 5.1 Alcatel’s 7670 RSP Upgrades ................................................................. 45
Figure 5.2 Cisco’s “IP-Enabled Frame Relay” Solution .......................................... 49
Figure 5.3 Mangrove’s Wireless Backhaul Solution for 3G Networks .................... 54

* All charts and figures in this report are original to Heavy Reading, unless otherwise specified.
