LIST OF FIGURES*

SECTION I

SECTION II

Figure 2.1 VOIP Service Taxonomy ................................................................. 10

SECTION III

Figure 3.1 Sample IM Clients ........................................................................... 13

SECTION IV

SECTION V

Figure 5.1 VOIP Infrastructure Taxonomy .......................................................... 18
Figure 5.2 3GPP IMS Release 7 Architecture ....................................................... 19
Figure 5.3 VOIM Service Infrastructure ................................................................. 19
Figure 5.4 OMA Draft Architectural Model for IM Using Simple ......................... 20
Figure 5.5 VOIM Client Functional Diagram ....................................................... 21

SECTION VI

Figure 6.1 "E" & "S" Sounds in Human Speech ..................................................... 23
Figure 6.2 Voice Samples at Different Sampling Rates ........................................... 23
Figure 6.3 Voice and Music Samples Using G.729 ................................................. 24
Figure 6.4 Effect of Delay on Conversational Quality .......................................... 25
Figure 6.5 High-Resolution Adaptive Jitter Buffer .............................................. 26
Figure 6.6 Traditional Jitter Buffer & Error Concealment Techniques ................... 26
Figure 6.7 GIPS IP Design Approach ................................................................. 27
Figure 6.8 GIPS Performance vs. Standard Codecs ............................................. 27
Figure 6.9 MOS Comparison of Traditional & Wideband Codecs ......................... 28

SECTION VII

SECTION VIII

Figure 8.1 Summary of VOIM Service Providers ................................................. 35
Figure 8.2 AIM Phoneline ................................................................................. 37
Figure 8.3 AOL’s ICQPhone ............................................................................. 38
Figure 8.4 Apple iChat ....................................................................................... 40
Figure 8.5 MindSpring Client Interoperable With Google Talk .............................. 42
Figure 8.6 Google Talk Client Interoperability ..................................................... 44
Figure 8.7 Windows Live Messenger With Video & Call Capability ...................... 46
Figure 8.8 Windows Live Messenger With Yahoo! Interconnectivity .................... 47
Figure 8.9 SightSpeed Client ............................................................................. 49
Figure 8.10 Gizmo Project Nokia 770 Client ........................................................ 51
Figure 8.11 Skype Client & Video Call ................................................................. 53
Figure 8.12 Skype Zones Beta Feature .................................................................. 53
