LIST OF FIGURES

SECTION I

Figure 1.1: The Four Factors Driving the Need for More Control.......................................................... 4
Figure 1.2: Growth in Global Mobile Broadband Users, 2008-2017 ........................................................ 4
Figure 1.3: Real-Time Contextualization of Service Delivery................................................................. 6

SECTION II

Figure 2.1: RAN Congestion Controls .................................................................................................. 11
Figure 2.2: QoS Class Identifier Scheme ............................................................................................. 13
Figure 2.3: RAN Congestion Control Based on Real-Time Taps ............................................................. 16
Figure 2.4: Linking Policy Management to RAN Congestion Control..................................................... 19
Figure 2.5: Call Flow in Policy-Driven RAN Congestion Control .......................................................... 20
Figure 2.6: UPCON Use Cases ............................................................................................................ 22

SECTION III

Figure 3.1: Summary of Vendor Propositions for RAN Congestion Control........................................ 23
Figure 3.2: NSN's Core-Based Congestion Solution ............................................................................. 33
Figure 3.3: Sandvine RAN Congestion Solution .................................................................................... 35
